Problem

Consumers have a significant potential in savings through the use of rewards credit cards, but choosing the right card is challenging.

Problem Characteristics

Hundreds of cards to choose from with various types of rewards (cash, points, miles, etc.).

Amount of rewards depends on type of expense.

True value of rewards can vary based on how they are redeemed.

Consumers' intended purchases should fit within their established spending habits.

Solution

BetterSwipe is an application that aids individuals seeking to maximize savings by analyzing their expenses and recommending rewards card choices.

Solution Characteristics

Build a spending profile from users' previous transactions.

Recommend rewards card options based on spending profile.

Take the detective work out of the users' hands.

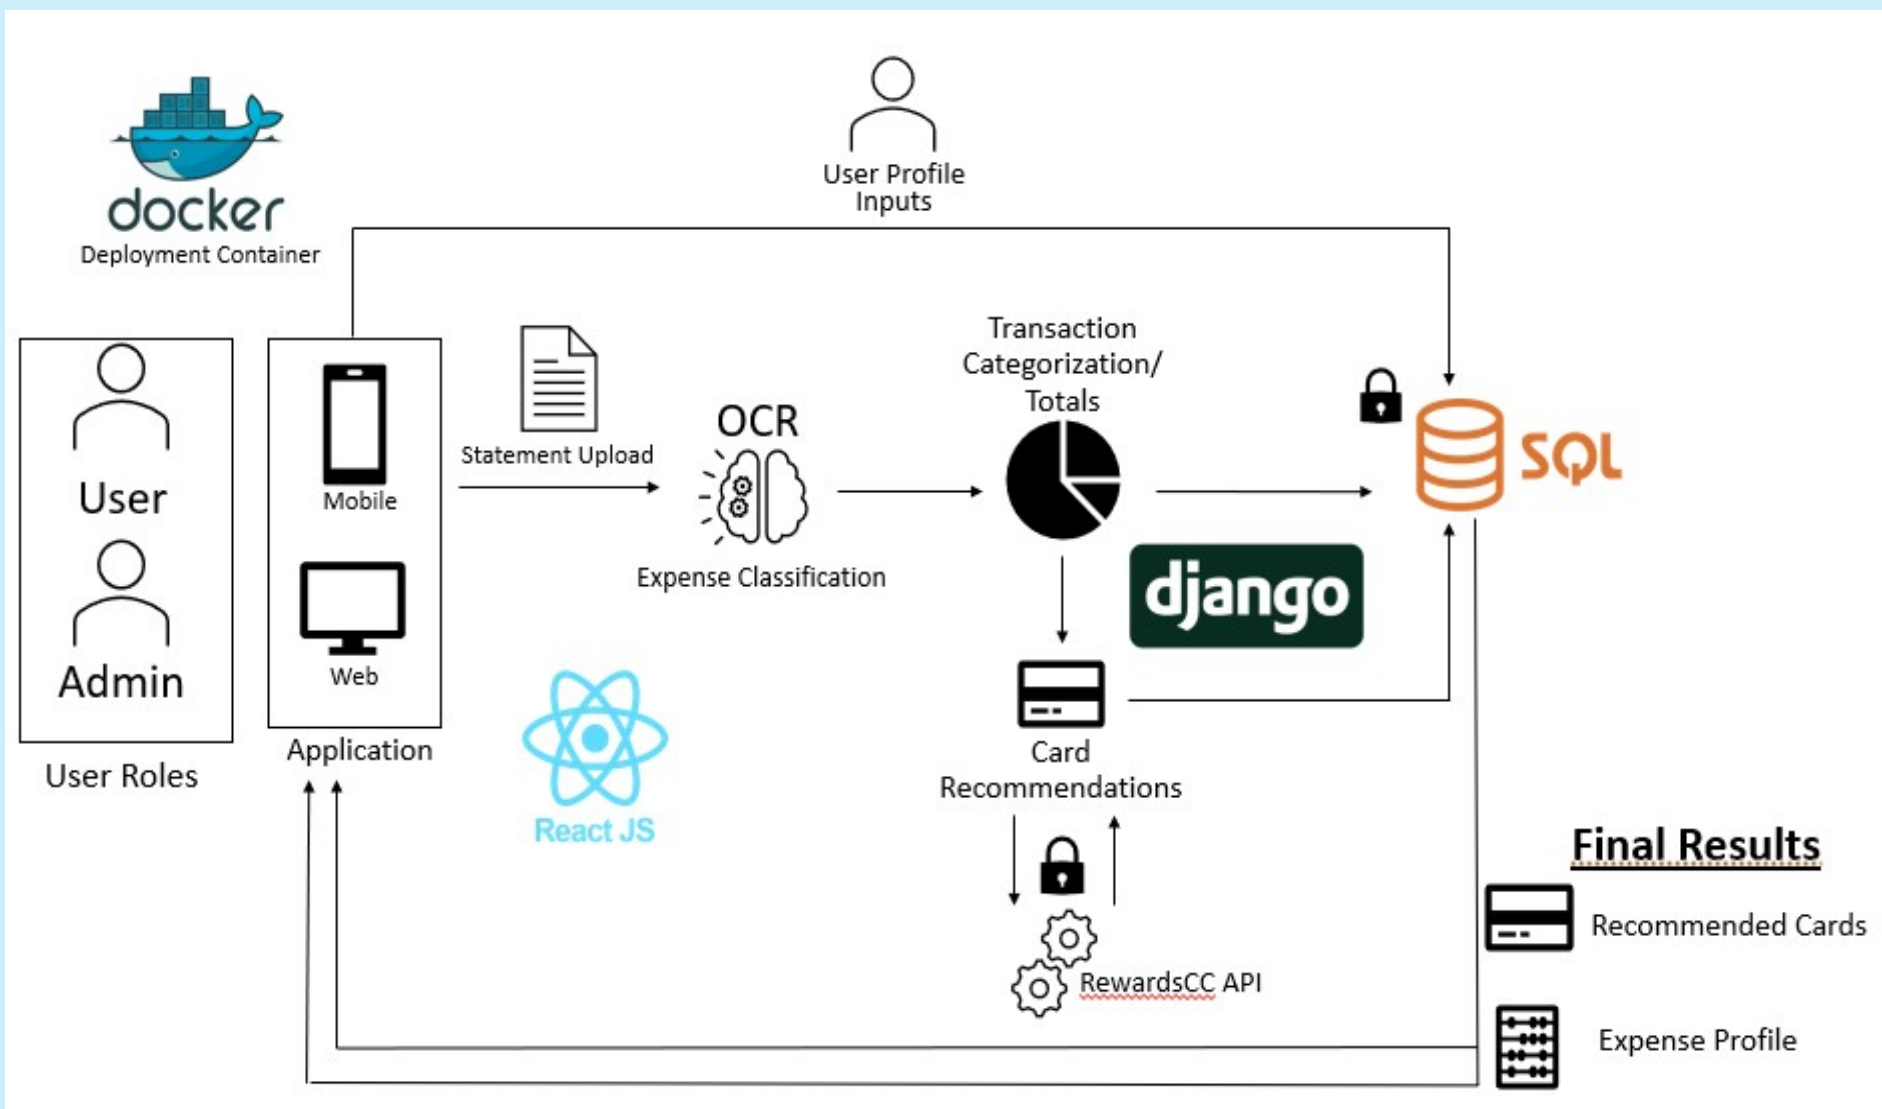

Simplify the rewards card selection process.

Continuously monitor & update users' expenditure profile.

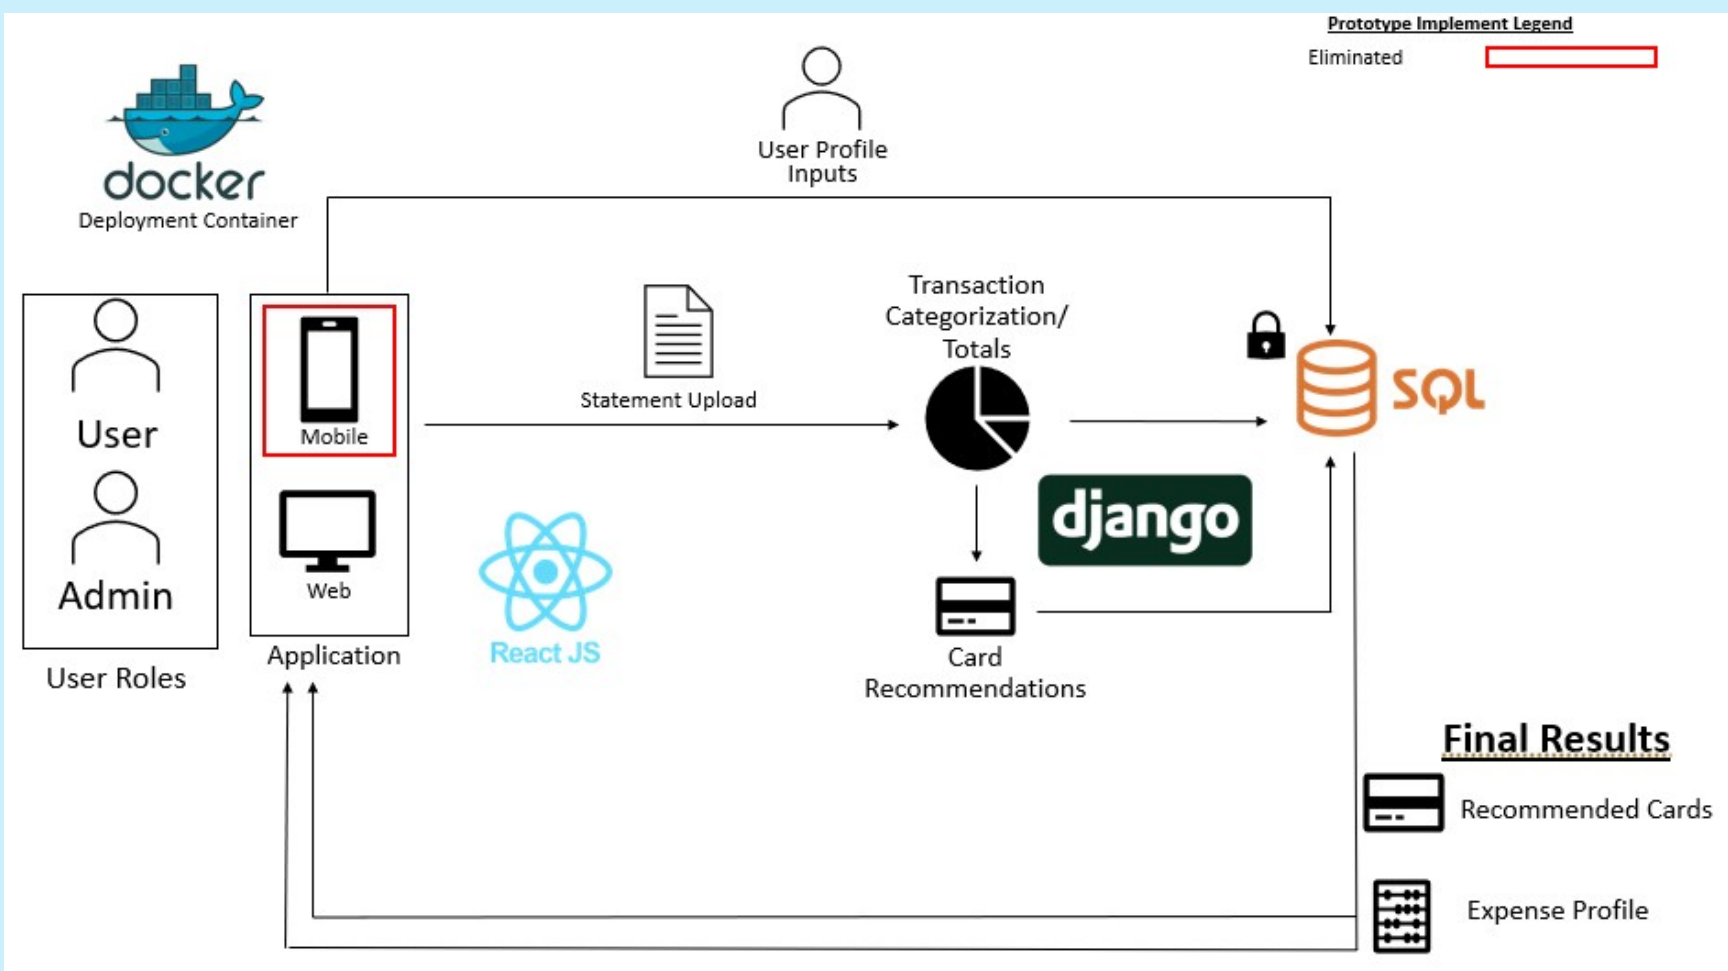

Innovative Features vs. Competition

Product Category	BetterSwipe	NerdWallet	Bankrate	Finder

UI/UX Screens

Landing Page

Landing page for the BetterSwipe web application

Dashboard

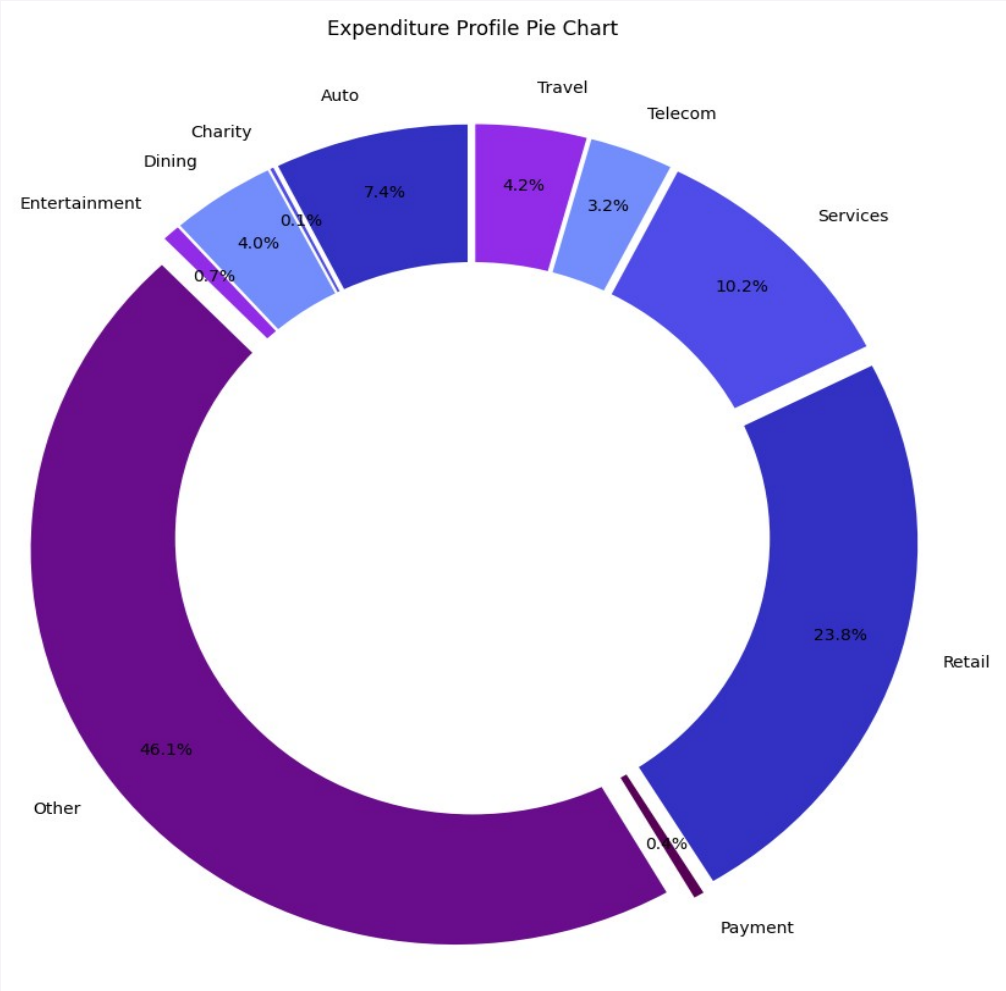

The BetterSwipe Dashboard is the first stop for users after registration and/or login. This is where a summary of their spending data is shown and from here, they can navigate to uploading statements or seeing a detailed history of past reports.

Monthly Spending Summary

Expense Summary

Users are presented with a graphical representation of their expenses following statement upload and analysis. This gives the user a visual understanding of their spending habits, and in the background, this data is used to help determine the cards BetterSwipe will recommend to the user.

Registration

Users are able to Register for a BetterSwipe account on our Sign Up page by providing name, number, email and password.

Card Recommendations

The Card Recommendations page shows a side-by-side list of several rewards cards, chosen based on BetterSwipe's analysis of the users' expenses via bank/card statements.
